About the Project

VFX Portal is a production tracking platform that bridges editorial tools and VFX production. It automates shot ingestion from EDL, XML, and AAF files via an OpenTimelineIO pipeline, synchronises live timeline state from DaVinci Resolve, Adobe Premiere, and Avid, and enriches shot data with task metadata pulled from ftrack. Producers and artists get a centralised hub to track shots, manage per-shot budgets, and monitor editorial changes across timeline versions — replacing fragmented spreadsheet workflows with a purpose-built tool that keeps production data consistent and up to date. Built with React and NestJS on a fully containerised stack.

Key Features

- Editorial File Import**
Ingest shots from EDL, XML & AAF via an OpenTimelineIO parsing pipeline
- Timeline Sync & Diff**
Native adapters for DaVinci Resolve, Premiere & Avid; diff any two snapshots
- ftrack Integration**
Pull task metadata, statuses & artist assignments directly from ftrack
- Shot Management**
Full shot list with timecodes, tasks, thumbnails, filtering & audit log
- Budget Tracking**
Per-shot & per-asset budgets with overview dashboards
- Role-Based Access**
Project-scoped roles + MFA via email OTP

TECH STACK: **React** **NestJS** **PostgreSQL** **Redis** **OTIO** **ftrack** **Docker**
